SAS Help Center: SAS Help Center: Welcome

A shared access signature (SAS) provides secure delegated access to resources in your storage account without compromising the security of your data. With a SAS, you have granular control over how a client can access your data.

Grant limited access to data with shared access signatures ...

For instance if your running EG which is server based, then the server needs the network mapping and the access to SP. To get a file list there are many posts out there on this. Again, depends what SAS software you use, but if its locally installed SAS, and you have the network map, then:

Access Sharepoint using SAS - SAS Support Communities

An account shared access signature (SAS) delegates access to resources in a storage account. An account SAS can provide

access to resources in more than one Azure Storage service or to service-level operations.

Create an account SAS - Azure Storage | Microsoft Docs

Generally speaking, SharePoint documents could be -anything- a Word doc, an HTML page, a PPT presentation, an Excel spreadsheet, a text file. The URL option of the FILENAME statement is most often used to access an HTML file and read an HTML table out of the HTML file and INTO a SAS dataset or to read a text file, as described here:

How to read data from the SharePoint - SAS Support Communities

This example imports a Microsoft Access table and creates a permanent SAS data set named SASUSER.CUST. The Access table has user-level security, so it is necessary to specify values for the PWD=, UID=, and WGDB= statements.

Importing a Microsoft Access Table - SAS OnlineDoc, V8

A SAS/ACCESS data set option applies only to the data set on which it is specified. statement and after a data set name (which references a DBMS table or view), the SAS System uses the value that is specified later, on the data set name. For more information, see SAS/ACCESS Data Set Options.

SAS/ACCESS LIBNAME Statement

The Little SAS Book has long covered reading and writing Microsoft Excel files with the IMPORT and EXPORT procedures, but for the Sixth Edition, we decided it was time to add two more ways: The ODS EXCEL destination makes it easy to convert procedure results into Excel files, while the XLSX LIBNAME engine allows you to access Excel files as if they were SAS data sets.
